

## ENGLISH

Fit for 10 AWG - 4 AWG Wire Terminal

**Great Insulation:** The insulated silicone cover is designed to protect battery terminals from exposure. Its good insulating performance helps cover exposed terminals or contacts, protecting against electrical short circuit or accidental contact.  
**Durable:** The silicone battery terminal cover has excellent toughness, which can accommodate thick wires without being easily torn. In addition, it offers high temperature resistance and can withstand voltages up to 2000V.  
**Good Elasticity:** The barrier of this car battery cover is thick design, which makes it have better elasticity performance compared with normal rubber cover, perform better in returning to the original shape after being stretched or compressed.  
**Wire and Terminal:** These stud terminal covers are capable of 10 AWG - 4 AWG wires, as for terminals, it can max work well on M10 terminals, and will cover the whole terminal, including nuts under protection.  
**Application:** The insulated silicone boot cover is compatible with battery studs and power junction blocks, making it suitable for automotive, car, truck, marine boat, and other applications. Its universal design fits most standard battery terminals.

Fit for 4 AWG to 2/0 AWG Wire Terminal

**Insulated Silicone Cover:** These battery terminal covers are silicone made, which have good insulated performance, will help in covering the exposed terminal or contact to protect electrical short circuit or accidental contact.  
**Good Elasticity:** The barrier of this car battery cover is thick design, which makes it have better elasticity performance compared with normal rubber cover, perform better in returning to original shape after it has been stretched or compressed.  
**High Toughness:** The silicone made battery terminal protector cover makes it have good toughness performance, making the cover capable of thick wires as well as not easy to be torn by thick wires.  
**Wire and Terminal:** These stud terminal covers are capable of 4 AWG - 2/0 AWG wires, as for terminals, it can max work well on M10 terminals, and will cover the whole terminal, including nuts under protection.  
**Application:** The insulated silicone boot cover can work well with battery stud and power junction block, suitable for automotive, car, truck, marine boat, etc.
