

Manual for Lighting Products

Dear customer:

Thank you for choosing our product. To ensure that you can use this product safely and correctly, please carefully read this manual before use and keep it properly for reference.

1、 Security Warning

Before installation, please make sure to turn off the power and ensure that the circuit is in a power-off state.

It is recommended that installation be carried out by professional electricians or experienced personnel to avoid danger caused by improper operation.

Do not use non waterproof products in damp environments (such as bathrooms).

Before cleaning, please disconnect the power and do not wipe the lamp with a damp cloth or corrosive cleaning agent.

Please do not disassemble or modify the product structure by yourself to avoid damaging the circuit or causing safety hazards.

If the product has any abnormalities (such as flickering, odor, overheating), please stop using it immediately and contact customer service.

2、 Open box inspection

After opening the packaging, please check if the product and accessories are complete:

Lamp body x 1

Installation accessories (screws, expansion tubes, brackets, etc.) x 1 set

Power adapter/driver x 1 (if available)

If any damage or missing is found, please contact the seller promptly.

3、 Installation steps (general guidance)

a. Installation of ceiling lights/pendant lights:

Fixed base: Align the mounting plate with the pre embedded junction box on the ceiling and fix it with screws.

Wiring: Connect the lighting fixture wires to the household power cord (usually the live wire is

brown/red, the neutral wire is blue, and the ground wire is yellow green).

Fixed lamp body: Align the lamp body with the base buckle or screw hole, rotate or tighten it for fixation.

b. Installation of wall lamps:

Mark the drilling position, use an electric drill to drill holes on the wall, and embed expansion pipes.

Fix the bracket, connect the wires, and cover the mask with the back cover.

c. Installation of desk lamp:

Assemble the lamp post and base, install the lampshade, and insert the bulb (if necessary).

Ensure that the switch is in the closed state before conducting the power on test.

d. Usage and maintenance

Confirm that the local voltage matches the rated voltage of the product before use.

LED lights do not require preheating and achieve optimal brightness when lit, with a lifespan of approximately ____ hours.

Regularly clean the surface of the lamp with a dry soft cloth to avoid dust affecting heat dissipation and light efficiency.

Do not frequently switch the power supply to reduce circuit losses.

5. Troubleshooting

Possible causes and solutions for the problem phenomenon

The light is not on, the power supply is not connected/the switch is damaged. Check the circuit, switch or replace the bulb

The voltage of the flashing light is unstable/the driver is faulty. Please confirm that the voltage is stable or contact after-sales service

Abnormal noise or poor heat dissipation/internal component issues. Power off for cooling and check ventilation

6. Environmental Tips

This product complies with RoHS environmental standards. Please recycle it according to local regulations and do not dispose of it casually.

Wishing you a pleasant use!

Your satisfaction is our greatest motivation.
